- Increases patient satisfaction

- Custom Scrolling Text
- Countdown Timers
- Picture-in-Picture (PiP)
- New App and 4K Nature Video Themes

**NEW!**

**Case Study - Improved MR  
Patient Experience & Productivity**

The PDC **Portable Video Display (PVD)** is specifically designed to offer MRI patients in-bore viewing of their favorite 4K Nature Theme video or DVD, goggle-free, regardless of patient orientation. For head-first patients, Mirror Glasses or a Head Coil Mirror is utilized. For feet-first imaging, GE Healthcare's Comfort Tilt Technology or a pillow may be all you need! The rugged rolling base features an articulating arm for optimum patient viewing positioning. The new **PVD** features include **Custom Scrolling Text** and **Countdown Timers** to keep patients informed and **Picture-in-Picture (PiP)** to offer patients and caregivers the option to see each other at any time during the scan, enhancing patient comfort and safety. The PVD seamlessly integrates with PDC's Caring MR Suite®

"We love [our PVD] and are having tons of positive feedback from patients. We've had at least 4 patients with histories of incomplete exams due to anxiety come in and finish exams easily."

– **Nichol A. Hughes,**  
Longstreet Clinic Radiology  
Services Clinical Coordinator
