

**NEW!**

MRI WIRELESS IN-BORE VIEWING

# CAMERA + PROJECTION SYSTEM

Projection allows patients to view video of choice.

Camera sends live feed of patient, head to toe, back to the Technologist desk.

## IMPROVING THE MRI EXPERIENCE

PDC's **Wireless In-Bore Camera + Projection System** - say goodbye to cords, goggles, glasses and patient set-up time.

- Projected video image appears on the top of bore - relaxing the patient
- Head-first and feet-first scanning
- Camera provides live video of the patient in the bore - enhancing safety
- Video image moves with the patient
- No added workflow
- Eliminates goggles, glasses & extra cleaning
- Total initial system installation time is 15 minutes
- No construction, cords or cables

PDC's **Wireless In-Bore Camera + Projection System** allows caregivers to visually monitor patient's well being, patient's eyes for signs of stress and patient's facial tone & breathing.

## BENEFITS

- MRI-safe
- Light weight (7 lb), portable & easy to install
- Head-first and feet-first scanning
- Zero artifacts
- No glasses, goggles or cleaning
- No motion sickness
- No construction, no cables, completely wireless
- Calms patient anxiety & claustrophobia
- Reduces sedation & anesthesia
- Improves safety - provides live video of the patient in the bore
  - Reduced repeat scans
  - Increased throughput
  - Decreased escapes

*Patent Pending*

**\*Currently in beta testing with select customers.**

**REMOVABLE PROJECTOR SCREEN** - used for feet-first imaging when patients' head is outside the bore

- Projector Screen snaps on and off in seconds
- Projector Screen accessory is only required if patient's head is outside the bore

System does not interfere with head coil

LEARN ABOUT THE ST. FRANCIS CHILD LIFE STUDY

- 1 Projected video image appears on the top of the bore
- 2 Camera provides live video of the patient in the bore - enhancing safety of bore
